

On the African coffee plantations, a remarkable discovery was made. The hands of coffee workers were found to be exceptionally soft and wrinkle free. Upon further investigation it was found that the coffee pickers' youthful hands were attributed to the CoffeeBerry they came into contact with while harvesting coffee beans. Today the benefits of Coffee- Berry are available to you in RevaleSkin, a new skin care product we are pleased to offer our patients.

What is the secret ingredient? CoffeeBerry, the fruit of the *Coffea arabica* plant contains polyphenols (including chlorogenic acid, proanthocyanidins, quinic acid and ferulic acid) that have been shown to have super anti-oxidant powers. As you may know, exposure to ultraviolet rays of the sun causes the creation of free radicals in the skin, which are responsible for the *breakdown* of collagen and elastin, resulting in wrinkles. Free radicals may also create precursor cells leading to skin cancer.

With its potent antioxidant powers, the CoffeeBerry has the ability to neutralize free radicals. RevaleSkin is the first skin care line based on the the CoffeeBerry polyphenols. In two clinical trials of six and twelve weeks, visible anti-aging benefits were shown including improvement in dark patches, diminished fine lines and wrinkles and enhanced overall skin texture.

The complete RevaleSkin line consists of:

- Daily cleanser
- Day cream with SPF 15
- Night cream

Today we need the protection of anti-oxidants more than ever. So enjoy your coffee (*Berry*) daily with RevaleSkin care products. Products are available online at www.dermskin.com or at our Bethesda and Germantown offices. ●
